marantz ®

RX101 BLUETOOTH MODULE

Now you can wirelessly send music stored on mobile phones (iPhone / iTouch) or PCs supporting the Bluetooth standard A2DP, directly to your Marantz product – thanks to the new RX101 Bluetooth Module.
It simply connects to the M-XPort and directs signals to your AV Receiver, Network Audio Player or System. And since the M-XPort also powers the module, no additional power adaptor is required. Check out the specifications section at the back of this catalogue to see which products have the M-XPort to connect the RX101.

Main Features

- Decodes Bluetooth A2DP audio signals from any Bluetooth device with A2DP protocol
- Decodes Bluetooth AVRCP signals to RC-5 for system control
- Output audio and RC-5 via dedicated Marantz M-XPort
- Build-in IR Receiver for hidden system control
- To be connected to M-XPort
